

I. Summary

For my COMP 126 Final Project (Spring 2020 Pandemic Edition) I chose to edit <http://www.irishwrecksonline.net/>. Because the website deals with the placement of shipwrecks along the coast of Ireland, I began to associate the client with scuba diving and the beach. This brought me to a classic, red/blue/white theme, similar to the colors of a beach ball. At the same time, the client also reminded me of hidden treasure that could potentially be found in these shipwrecks, so I decided to incorporate a treasure-like colorscheme. More specifically, my goal was to convey a mix of treasure and the beach to create an adventurous tone for my website. I believe that the look and feel of my website will convey an adventurous tone by mixing colors associated with the beach and treasure, as well as adding some features that will allow the user to interact and feel as if they are getting closer to going on an adventure themselves. This will be achieved through the incorporation of blue for the ocean, golden/cream like color to represent treasure or sand, and red to bring aspects of the beach again. I am confident this will be a good fit because red and blue are on near opposite sides of the color wheel, making them close to complementary colors. Finally, I thought the website needed a way for users to learn more and stay up to date, so I will be adding a form to allow users to sign up for mailing lists.
